

Frontend Module (User Interface & Data Capture)

This handles the direct interaction screens for the Bank Executive and the Customer.

- **Step 1:** Customer visits the Branch and request for Savings or Current Account Opening with the Bank. (UI screen to select the account type)
- **Step 2:** The Bank Executive asked the Customer to fill the Account Opening Form. (UI rendering of the digital form)
- **Step 3:** Customer fills the Account Opening Form, which includes details like:
 - a. Nominee Details
 - b. Mode of Operation
 - c. Netbanking/Mobile/SMS Banking Registration
 - d. Initial Funding Amount via cash, cheque or fund transfer, etc.
- **Step 4:** Customer submits the Account Opening Form to the Branch along with Supporting Documents like Aadhar, PAN, Driving License, Ration Card, etc. (File upload components and form submission)

Python Module (Verification, Processing & Automation)

This handles document extraction, background verification, and scheduled scripts.

- **Step 4a:** Process the uploaded documents (Aadhar, PAN, Driving License, Ration Card) using Optical Character Recognition (OCR) to automatically extract text and reduce manual entry.
 - **Step 5:** Bank performs the KYC by verifying the Aadhar and PAN details and Due Diligence by verifying the AML Screening, Negative List Screening, etc.
 - **Step 5a:** Run a rules-based check or risk-scoring algorithm on the Initial Funding Amount and its source before allowing the account creation to proceed.
 - **Step 9a:** Dynamically generate the personalised digital Welcome Kit, formatting the new customer's details into secure PDF documents.
 - **Step 10:** Run a scheduled End-of-Day (EOD) batch script to cross-reference all newly opened accounts and their initial funding amounts against the CBS database for reconciliation.
-

Java Module (Core Business Logic & CBS Integration)

This acts as the central orchestrator, managing the database, transactional integrity, and communication with the core banking systems.

- **Step 6:** Post Positive KYC and Due Diligence verification (received from the Python service), the Bank does the Data Entry in the CBS (Core Banking Software) using the Account Opening Form submitted by the Customer.
 - **Step 7:** Bank opens the Account in the CBS (Core Banking Software) along with a unique Customer Id, Account Id, Nominee Registration, etc.
 - **Step 8:** Bank update the Account with the Initial Funding Amount paid by the Customer. (Handling the financial transaction securely)
 - **Step 9:** Bank issues the Customer Welcome Kit, Passbook, Cheque Book, Debit Card and Netbanking/Mobile/SMS Banking Activation. (Triggering the downstream systems for fulfilment)
-
